

BERNARDO EBEL

Backend Developer (.NET)

.NET developer focused on backend development, with hands-on experience building reusable libraries, REST APIs, and web applications. Works with domain-driven principles, semantic versioning, and clean code organization. Seeking a Junior position to grow technically in environments that value good engineering practices.

PROJECTS

Ebel.ValidatorKit - .NET Validation Library ([GitHub](#))

.NET validation library focused on domain rules and clear contracts, created to study reusable library design and semantic versioning. The project includes contract definition, separation of responsibilities, a CI/CD pipeline for automated nuGet publishing, and a demo API for Consumption and testing.

Blazor SPA ([GitHub](#))

Single Page Application built with Blazor Server for product management, developed to practice component-based architecture, state management, and communication between components in a full CRUD scenario.

ToDo List - ASP.NET MVC ([GitHub](#))

ASP.NET MVC web application for task management, developed with a focus on separation of concerns, classic MVC flow, and data persistence using Entity Framework Core.
